SVEDBRO WRECKING BAR

The bar is made of specially alloyed spring steel. The overall bar is tempered for extra strength. Manufactured in five sizes.

The key characteristics are:

Extreme strength in relation to their length and low weight. In tests performed by the National Swedish Institute for Material testing, the wrecking bars were found to withstand extreme strain without yielding.

The chisel end and the nail claw end are both sharpened so the edges can easily be wedged behind ledges planks, mouldings etc.

Both the chisel end and the nail claw end are designed with broad surface to provide minimal damage and marring to the work area.

The nail claw has a precision angled V-slot design to allow nails to be pulled regardless of the size of the head. 20-year Guarantee

Manufactured since 1942

Available sizes of Svedbro wrecking bar:

11" / 28 cm 0.9 Lbs / 0.4 kg
 20" / 51 cm 2.0 Lbs / 0.9 kg
